

From geometry to measurement.

Volume 3 completes the original three-volume plan and applies the theory: CMB temperature, the Hubble constant and geometric cosmology, Bell inequalities, entanglement and quantum computing, the Casimir effect and the connection to quantum field theory.

It adds comparisons with other theoretical approaches, a discussion of objections and the first presentation of the FFGFT formalism — the Fundamental Fractal Geometric Field Theory.

The parameter $\xi = 4/30000$ appears here in cosmological, quantum-physical and field-theoretic settings — consistent in every context.

Johann Pascher

Johann Pascher is an independent theoretical physicist and author of FFGFT / T0 theory. In more than 300 documents he develops a geometric framework that derives the fundamental constants of physics from a single dimensionless parameter ξ . All work is openly accessible.
