

Scale Hierarchy: Planck Scale vs T0 Sub-Planck Scale $L_0 = \xi \cdot \ell_P$

Planck length
 $\ell_P \approx 10^{-35} \text{ m}$

Nucleus
 $\sim 10^{-15} \text{ m}$

Atom
 $\sim 10^{-10} \text{ m}$

Human
1 m

$\xi \approx 1.33 \times 10^{-4}$

T0 sub-Planck
 $L_0 = \xi \cdot \ell_P \approx 10^{-39} \text{ m}$

$\log_{10}(\ell / 1 \text{ m})$
