The methodological consolidation.

Volume 5 carries the methodological framework of the theory. The Hilbert-space bridge relates FFGFT formally to quantum mechanics: operational equivalence with interpretive divergence.

The layer and scale-ladder documents work through the description in layer 1 (static, compact) and layer 2 (dynamic, SI-projected) systematically. They are joined by the complete field-theory presentation, the recursion operator and the information formalism.

The volume closes with the epistemic self-positioning of Doc. 262: acceptance without visualisation and the inside view of decompactified time.

Johann Pascher

Johann Pascher is an independent theoretical physicist and author of FFGFT / T0 theory. In more than 300 documents he develops a geometric framework that derives the fundamental constants of physics from a single dimensionless parameter ξ. All work is openly accessible.
